ABSTRACT

Specifically designed to support a library science course on micrographics, this extensive bibliography presents information on computer output microfilm (COM) and the technical aspects of microreproduction technology. Standards, hardware, copyright laws, government documents, and utilization are explored. Items selected are for the most part in English and are easily available in the United States. (Author/DS)

****
* Documents acquired by ERIC include many informal unpublished *
* materials not available from other sources. ERIC makes every effort *
* to obtain the best copy available. nevertheless, items of marginal *
* reproducibility are often encountered and this affects the quality *
* of the microfiche and hardcopy reproductions ERIC makes available *
* via the ERIC Document Reproduction Service (EDRS). EDRS is not *
* responsible for the quality of the original document. Reproductions *
* supplied by EDRS are the best that can be made from the original. *

PREFACE

So vast is the amount of material about micrographics that no bibliography of the field could ever hope to be complete. Yet students, educators, and librarians have not so far had a single source which would provide easy access to a significant portion of this literature. This bibliography has been especially designed for a course on micrographics offered in the School of Library Science at George Peabody College for Teachers. The vast majority of items listed here were published in 1970 or later. In general, the terminus ad quem is 31 December 1974.

The compilers have not attempted to compete with the outstanding "Microform Bibliography" in Felix Reichmann and Josephine M. Tharpe, Bibliographic Control of Microforms (Westport, Conn.: Greenwood Press, 1972) which covers (1) catalogs and lists, (2) collections and series, (3) manuscripts and archival collections, and (4) reference books, to which anyone interested in microforms is most enthusiastically referred. Nor is their brief "Bibliography of Literature Used" in the same work to be overlooked.

Because of our intended audience, we have been most selective in choosing items dealing with Computer Output Microfilm (COM) and with some of the more technical aspects of production technology. Items selected are primarily in English and are easily available in this country. The subject divisions are primarily designed to be suggestive of major concerns for educators and librarians.

Material in the final section is wide-ranging, including overviews, use studies, the teaching of courses on micrographics, technology, and special applications. Most items have been selected with an eye to college and school library situations, but numerous materials are included which relate to the total field of micrographics and items which, although most pertinent to industrial concerns, have wider implications as well.

The compilers wish to express their special appreciation to Marilyn R. Skinner who typed and proofread the original document and to Sheila Scullock who prepared the Index. Thanks also go to Bill Teague and Tom Paine of Computer Microfilm International who have given us good advice and useful suggestions.
